+86(173)2833-3196 ◇ Guangzhou, China

+1(352)642-5962 ◇ Florida, US

OBJECTIVE

Master student in University of Florida, seeking for full-time Artificial Intelligence Engineer roles.

EDUCATION

M.S. in Electrical Computer Engineering, **University of Florida** Sep' 2019 - Present

Courses: Pattern Recognition, Advanced Data Structure, Image Processing & Computer Vision, and IoT Design.

GPA: 3.60/4.0

B.Eng. in Artificial Intelligence & Technology, **South China University of Technology** Sep' 2015 - July' 2019

Thesis: Electronic equipment failure detection and forecast analysis using SVM and LSTM

TECHNICAL SKILLS

Libraries & Tools	Git, \LaTeX , OpenCV, HTML5/CSS,
Frameworks	TensorFlow 2.0, Pytorch, MySQL
Languages	Java, Python, SQL, Shell Script, MATLAB

EXPERIENCE

Big Data & Machine Learning Analyst Intern

Apr. 2021 - July. 2021

VIP Information Technology Co., Ltd

Guangzhou, China

- Crawled POI data by using 'urllib' in **Python**, growth data storage are managed by **MySQL**.
- Developed a POI data **retrieve service website** based on **RESTful** APIs with **Node.js**
- Converted serialized POI data and segmented into **fine-grained** address (States, Cities, Districts, Streets)
- Advanced the mapping from longitude/latitude data to exact address using **Hidden Markov model (HMM)**, achieved 3% reduction in converting time.

Research Intern

Apr. 2020 - Aug. 2020

STCA NLP Group

Chinese Academy of Sciences, China

- Built an Interactive Dual **Generative Neural Networks (GNN)** for Image Captioning, enhanced the Network training speed with **Quantization Methods**.
- Improved knowledge-aware Dialogue Generation based on Questioning Answering, applied it for multi-modal tasks with an overall improved performance.

COURSE PROJECTS & RESEARCH

Pattern Recognition Related Work

Nov. 2020 - Apr. 2021

- Constructed a CNN model on the embedded platform for image recognition, **quantized** the model to reduce overall running time on GPU while maintaining accuracy.
- Rebuilt a model based on Yolo-v3 for video recognition through Pruning, and gained faster running speed on GPU without reducing accuracy.
- Achieved the training time of the quantified AlexNet model reduced by 30% amid accuracy declined only 0.08.
- Improved the precision of Yolo-v3 model after pruning, achieved the recognition of each frame reduced by about 2 latency FPS and reached a more accurate recognition of the objects in a video than the original model.
- Collaborated in writing a paper and published on **ICAITA 2021**.

Internet Plus Competition

Nov. 2020 - Jan. 2021

- Designed a control system for a 6-rotor Unmanned Aerial Vehicle (UAV) by applying a newly Proposed Convergent Differential Control Neural Network. Set up a newly-designed posture and attitude Controller for UAV model. Collaborated in writing a patents and won the Internet Plus Competition.

PUBLICATIONS & AWARDS

- Xiao Hu, **Hao Wen**, "Research on Model Compression for Embedded Platform through Quantization and Pruning" (ICAITA 2021)
- Honorable Award in 2019 Mathematical Contest in Modeling of China
- The 6th China International College Students "Internet+" Innovation and Entrepreneurship Competition Silver Medal: (top 3%)
